

A **TÜV certificate**, issued by a "Technischer Überwachungsverein" (Technical Inspection Association), verifies the safety and quality of products, systems, or processes. These German and Austrian organizations are internationally recognized for their rigorous testing and certification services. A TÜV certification is globally accepted as a benchmark for safety standards, particularly in structural and electrical product safety.

TÜV Rheinland is one of the world's leading providers of testing and inspection services.

In its role as an independent third party, TÜV Rheinland tests technical systems, products and services, supports projects and tests processes for companies and organizations. Its experts also train people in a wide range of careers. To this end, TÜV Rheinland operates a global network of approved labs, testing and education centers including Australia.

More information about the organisation can be found here <https://www.tuv.com/australia/en/>

The **TÜV test mark** is awarded for certified products, certified management systems and personnel certifications as well. Quality and transparency strengthen confidence in products, services, and expertise.
